- Full on-site service available
- Fast response
- Out of hours service
- Full belt fitting
- Periodic repair work
- Breakdown repair
- Excellent rates for service and repair
- State of the art press for high performance weld.

Specialist services are carried out by our team of highly skilled expert engineers at Biscor Ltd for a variety of customer requirements. These include: installation, overhaul, repair, maintenance and recommissioning of conveyor belts and other applications utilising any of our range of industrial process fabrics.

Not only does Biscor manufacture and coat the technical textiles and industrial fabrics, but also converts this material into engineered products. By employing techniques such as heat bonding, machine cutting and sewing, Biscor fabricates a varied range of end products for a vast array of applications and industries.

Biscor's technical advisors will be happy to discuss the most cost effective and efficient products for your application and are happy to trial products with you to establish the ideal fabric or belt for optimum results. Our team of engineers and fitters are continually undergoing training and development to ensure they are proficient with the latest technological developments. Our aim is to reduce downtime to the absolute minimum whilst offering support and guidance at every step of the way.

Biscor manufactures, converts and markets technically advanced resistant fabrics of glass fibre, Kevlar® and Nomex® and polyester. These fabrics are enhanced with fluorocarbon coatings of Teflon® or silicone rubber. The resultant material is renowned for its excellent resistance to extreme temperatures and superior non-stick properties, as well as withstanding severe chemical and biological environments.

Teflon® is a registered trademark of DuPont™.
