Goldweld.co.uk is a new online shop selling high quality window welding fabric to the PVC-U fabrication industry.

10% discount off your first order when you register and buy online

PVC-U welders of windows, doors and conservatories often use a considerable amount of Teflon® coated welding fabric as part of their fabrication process. Typically bought via machine manufacturers and distributors, the cost of the material can vary greatly – as does the quality.

Goldweld is a premium grade welding fabric, available in adhesive and non-adhesive formats – bought by the roll or in packs of sleeves or die cuts to suit specific machine models.

A high quality welding fabric, such as a market leading brand like 'Goldweld', is essential to the smooth running of any PVC-U welding outfit, regardless of the size of business or nature of the finished product. By using a high quality product and changing the fabric on a regular basis (as per the machine manufacturer's instructions and also in accordance with guidelines from the British Plastics Federation) one can ensure a strong, clean weld resulting in a superior finished product.

Goldweld maintains optimum platen temperature up to 260°C and will help to ensure a maximum return from investment in welding equipment. This product has been specifically engineered for the PVC-U welding industry and the rigours the fabric will experience in such extreme conditions.

Not only does the use of a quality fabric such as Goldweld result in an improved weld to the frame or door – but also maximises the efficiency of the operation as Goldweld has a longer service life than many of the alternative fabrics which are currently on the market. The specially coated material resists the searching nature of molten PVC-U and so does not have to be changed as regularly, hence less down time within a given period of production.

Goldweld is manufactured by Biscor Ltd, experts in the PTFE coating sector. (PTFE is polytetrafluoroethylene which is the chemical name for the DuPont™ brand Teflon®). Biscor Ltd is based in Bradford, West Yorkshire, and has been coating process fabrics for nearly 30 years. Biscor's markets include many industries from food processing to aerospace and practically everything in between. Biscor are always developing innovative new products as part of their continual commitment to excellence.

The online shop www.goldweld.co.uk will allow the PVC-U door, window or conservatory fabricator, to purchase Goldweld online 24 hours a day, pay safely and securely by credit card and receive a roll of Goldweld the next day. No matter how much experience of the Internet one may have, the online shop is easy to use. Visiting the site itself will be an informative experience, download technical data for Goldweld and Goldweld Adhesive, read about the product uses and also enjoy our 3D movie of a window welding machine using Goldweld.

If you have any questions or queries – you will be able to find out the answers on the site, or by emailing our dedicated customer services team. Our team are in close liaison with technical staff and will endeavour to answer your question straight away – or at least within one working day.

The benefits to buying online with www.goldweld.co.uk include:

- ◇ Reputable established company
- ◇ Quality product
- ◇ Specialist die cut shapes and sleeves
- ◇ Excellent prices
- ◇ Outstanding customer service
- ◇ Next day delivery
- ◇ Easy to use online shop
- ◇ Credit card payment online (no waiting for credit application forms)
- ◇ Dedicated account management facility
- ◇ Full order history
- ◇ View order status
- ◇ Email notification of special offers

Over the following months Goldweld.co.uk will be expanding its range of products as customers provide their machine requirements. It is our aim to have the most extensive range of machine make and model specific die cut sleeves and belts or bands available within our product library and we ask you, the PVC-U welder to help us to do this – and in turn help yourself. By telling us through the website registration process about your machines, we in turn offer you an introductory 10% discount on your first order. We will liaise by email to ensure we have the correct dimensions for your machine and from then on, the product will be available to buy on line.

Goldweld.co.uk will be exhibiting at the Glassex 2006 exhibition at the NEC in March next year and you will no doubt be hearing and seeing a lot more about Goldweld products in the trade press and on relevant websites.

For further information visit www.goldweld.co.uk or call 0800 731 148 – or for comment and discussion, please contact Liz Baker, Marketing Manager at Biscor Ltd on 01274 699436.
